

Primary Colour Palette

The consistent use of colour is vital to effective brand recognition.

Our brand should always be represented in one of the colours on this page, aside from specific recommendations within this guide.

Do not use any other/unauthorized colours.

Use of the Pantone Matching System is highly recommended to ensure color consistency across any and all touchpoints. If Pantone colour matching is not available or out of budget, please take great care to match the hues above precisely.

We prefer a natural matte/uncoated paper stock, so always match to the Uncoated Pantone book.

Using White & Black

Black and white are vital components to the brand palette.

Whenever possible, avoid true black and true white in favor of these subdued tones.

Both white and black are used to define space on the page, on the package, and on the website.

Create high contrast by combining both: perfect for legible typography. This guide serves as an excellent example of this.

We recommend an expansive use of negative space in brand executions, which can be created using either white or black.

Colours

Using Tints

We prefer our brand colours used without editing, but some situations require the use of colour tints, especially on the web. For example, when a user hovers over a button on our web site, using a tint change can help confirm their action.

If necessary, use a 20% tint step system, keeping legibility in mind. Any tint below 60% used as a background will require dark text.

Inter.

A workhorse sans-serif - The typeface we chose for all brand executions.

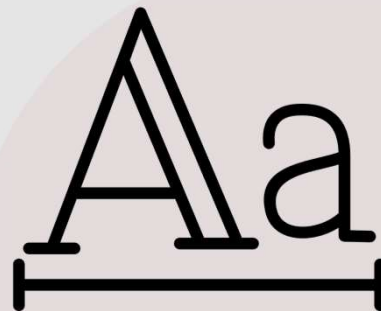

Inter, designed by Rasmus Andersson, is a **sans-serif typeface** designed specifically for screens. Inter features a tall x-height that increases legibility using all sizes, and includes a wide array of glyphs, weights, and special features. We love it.

Inter is free and open source: As such, neither paid licenses nor accreditation are required for use. Download it free from Google Fonts.

Acceptable Alternatives:

Inter should be used for every brand execution. In rare circumstances, however, we recognise it is not realistic to use custom fonts. In which case, system default **sans-serif** fonts should be used: **Helvetica and Arial**, respectively.

Note: This should not occur frequently.

Recommendation Going Forward

The typeface we chose for all brand executions.

Sans-serif typeface – Refers to a variety of fonts – We need to be more specific

- Inter (available on Canva), Helvetica, DM Sans or Open Sans (available Microsoft) to be used for all Body components , Sub-headings, etc.
- To make Headings more clearer, I recommend we use “League Spartun”.

Weights

Hierarchy & Weight

Inter is a **variable-weight typeface**, which means you are able to customize weights and angles to create an infinite number of weights. That being said, we typically stay within these four weights. Use contrast between heavy and lighter weights to communicate relevant importance, otherwise known as hierarchy, of information.

Using Type

The Six Type Commandments

When constructing layouts, these tips will help you build dynamic, interesting, and on-brand compositions with typography. While these rules are proven and sound, sometimes breaking them is the right call.

01

Stay Left-Aligned, Rag Right

Legibility and clarity are vitally important to great typographical layouts. Since most people read from left to right, we should align our type accordingly. And besides, we're a little off-center as a brand anyway.

02

Skip Weights & Double Size

Contrast is the name of the game when it comes to great design. When in doubt, skip a weight when pairing two weights, and double the size between two text elements.

03

Align X-Heights or Baselines

Whenever you place text next to each other, either align the baselines (the line that the bottom of a lowercase x sits on) or align the x-heights (the top of a lowercase x). This helps align each line visually.

04

Watch The Rag

When setting paragraphs, keep an eye on the right (ragged) edge. If the rag unintentionally creates a recognizable shape, consider tweaking the language or resizing the container. Also, try to prevent single-word lines (orphans).

05

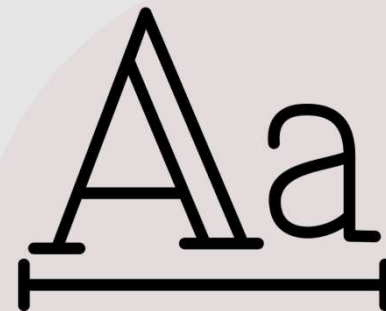

Give Things Space, If Needed

Negative space, or the space around elements is vitally important. That being said, if informational elements belong together, move them closer together. Use grouping wisely: just try not to cram too many things in one space!

06

Keep Line Length Reasonable

It is easy for the user to get lost in long lines of text, and short ones are easily ignored. It's best to keep lines between 45 and 70 characters long, depending on the size of the font. This will ensure legibility as the font sizes increase or decrease.

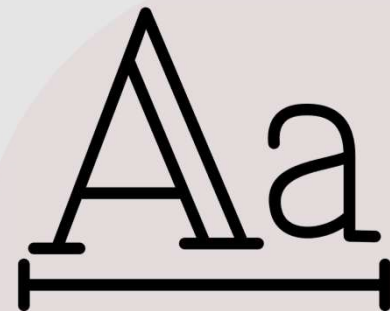

Digital Type

Website Headings

The heading structure on this page is in direct reference to our current website design. This is the basic breakdown of standard heading sizes, and their relationship to body copy. Obviously, exceptions exist, especially between different page templates. Also, the level of each heading should be set in accordance with search-engine and development best practices.

Heading One	USAGE • Page Headings • Major Section Headings • Emphasized Words	SPECIFICS - Font: Inter Medium - Size: 80px (4.44rem) - Bottom Margin: 50px
Heading Two	USAGE • Section Headings • Blog Body Headings • Product Headings	SPECIFICS - Font: Inter Semi-Bold - Size: 52px (2.89rem) - Bottom Margin: 30px
Heading Three	USAGE • Sub Headings • Call To Action Headings • Blog Sub Headings	SPECIFICS - Font: Inter Semi-Bold - Size: 34px (1.89rem) - Bottom Margin: 30px
Heading Four	USAGE • Minor Headings • Table Labels • Sub-Sub Headings	SPECIFICS - Font: Inter Bold, Uppercase - Size: 18px (1rem) - Bottom Margin: 20px

Digital Type

Body Text: Met prepudi piderovid estio magnat adit offictet as aut dolori acerspedis

The root body text size, line width, line height, and tracking are set to enhance visibility and legibility on all screens. Certain typographic situations specific to digital type like block quotes and text links are also outlined on this page.

Paragraph:

- Weight: Inter Light
- Size: 18px
- Line Height: 26px
- Colour: Grey
- Bottom Margin: 16px

Strong OR Bold:

- Weight: Inter Medium

Minimum Width:

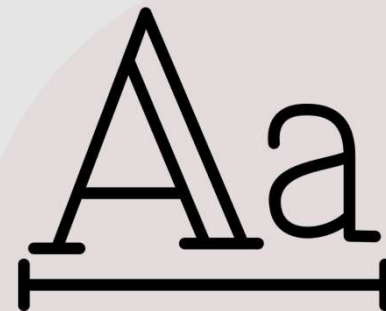

- 700Px

Block Quote:

- Size: 30px
- Line Height: 36px
- Margins: 20px, 0
- Padding: 0, 0, 0, 40px
- Border (Left): 3px

Text Links

- Weight: Inter Medium
- Colour: Green

Lists: List styling is another important element of digital typography. Typically, lists are found in the body of blog articles, pages, and product descriptions. Styling for both ordered lists (ol) and unordered lists can be found on this page.

Ordered List (ol)

- 1. North America
- 1. Los Angeles, CA
- 2. New York City, NY
- 3. Boston, MA

2. Europe

- 1. London, UK
- 2. Rome, IT
- 3. Paris, FR

Specifics:

Weight: Inter Light
 Size: 18px
 Line Height: 26px
 Color: Grey
 Bottom Margin: 14px
 Indents: 20px

Unordered List (ul)

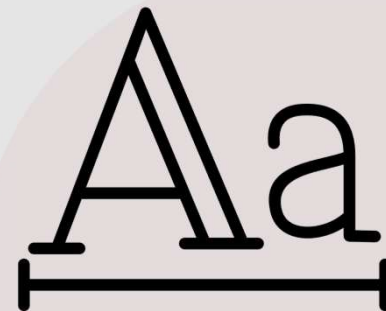

- North America
- Los Angeles, CA
 - New York City, NY
 - Boston, MA

Europe

- London, UK
- Rome, IT
- Paris, FR

Specifics:

Weight: Inter Light
 Size: 18px
 Line Height: 26px
 Color: Grey
 Bottom Margin: 16px
 Indents: 20px

Common Errors

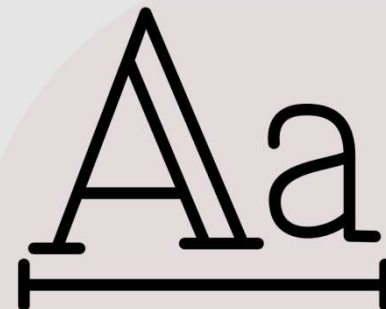

Note: This is not a comprehensive list of errors. These are simply the most common or egregious errors.

Do's and Don'ts Not To Follow:

- Use unauthorized fonts or typefaces. The only exception is stylized merchandise or illustrations
- Keep tracking, kerning, and leading reasonable and legible. Do not stray far from the examples in this guide.
- Not use centered or completely justified alignment for multi-line text.

here are no exceptions.

- Not stretch, squish, or otherwise mangle typography. Use the appropriate weight instead.
- Not use a stroke or outline on typography. Also avoid using a drop shadow on typography at all costs.
- not use typography on any angle other than 0° or 90°. Our typography should always read up if 90°.

Iconography

Iconography is integral part of our merchandising, packaging, website, and wayfinding. We have developed a library of over 2000 approved icons that may be used in any brand execution.

When it comes to iconography style, we like thick outlines and geometric shapes. If you need to construct new icons, keep the overall shape simple. Reduce the subject matter down to its essence.

When placing icons in a layout, they should never be partially cut off. The icons shape, line weights, and construction should not be altered. Do not use the icons in place of or as an element within our logo. Ensure enough clear space is used so that the subject matter is legible.

A full iconography library is available in our asset library, including seasonal varieties. Before constructing new icons, check there.

Elements

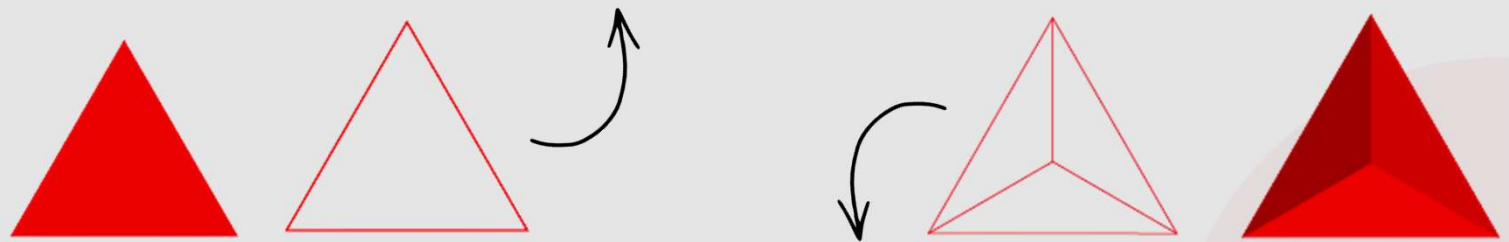

Shapes

Drawing inspiration from the shape of our logo icon, several standard and abstract geometric shapes can be used in graphic compositions in a variety of ways.

Use the shapes on this page as inspiration to create new elements. Whenever possible, avoid using curved shapes in favor of straight lines and geometric angles.

Abstract Polygons:

- The shapes above are pulled directly from our logo icon, and can be used as pattern elements, frames, and many other graphic elements.

Standard Shapes:

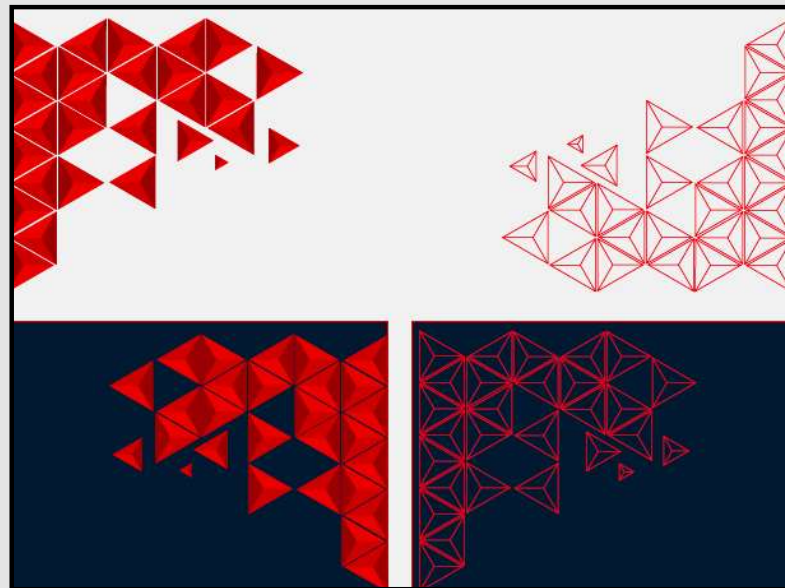

- While our design motif is typically very minimal, the use of some standard shapes as graphic elements or grouped into patterns can enhance a layout.

Elements

Patterns

We have developed four pattern styles that are approved for usage as backgrounds, in print materials, and in packaging.

When using these patterns, feel free to invert the colour ways (switch the background and foreground colours), but do not otherwise modify the colours.

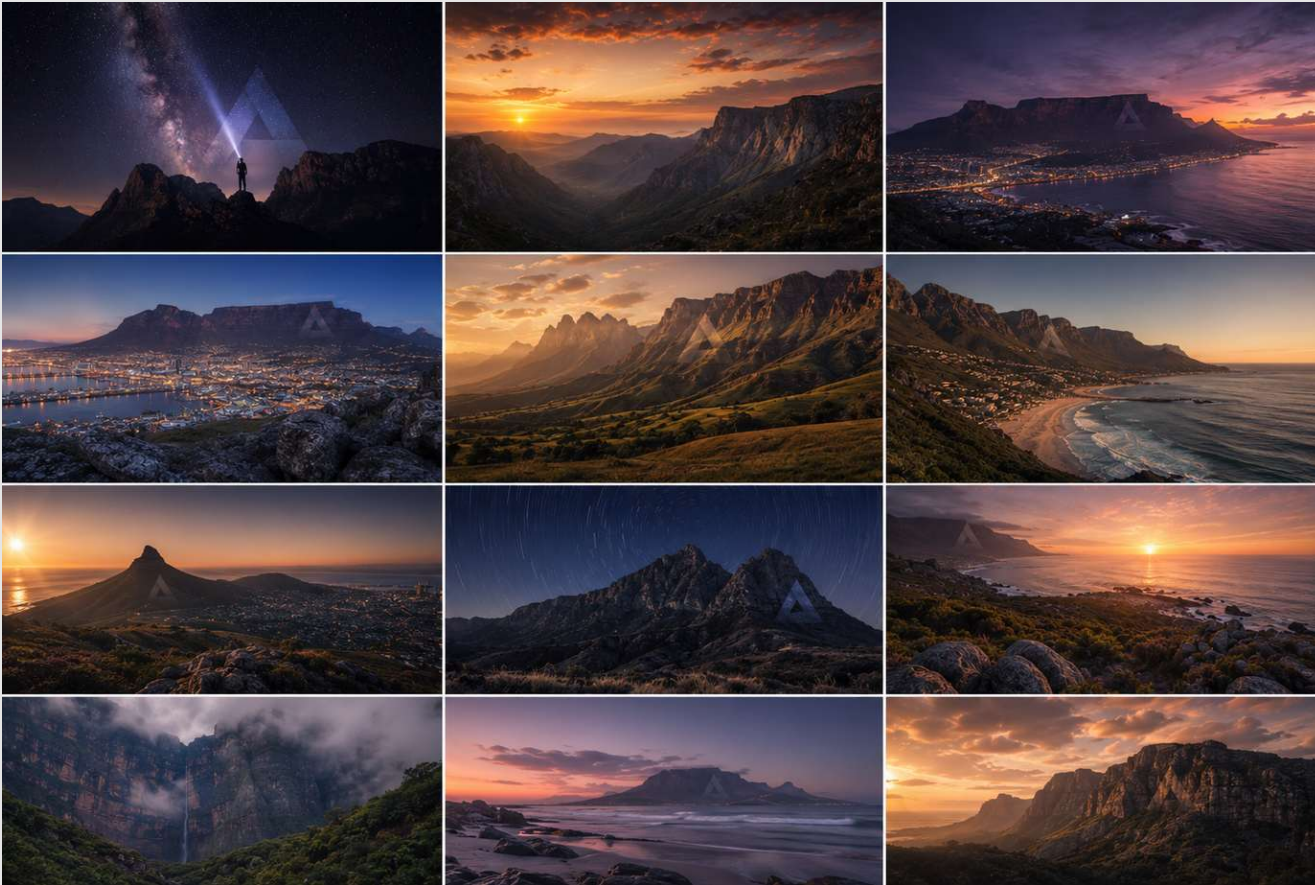

Visual Branding

Recommendation: Only Use Mountain Imagery with Night Sky to create a mature and strategically aligned brand identity for ConvergenC3

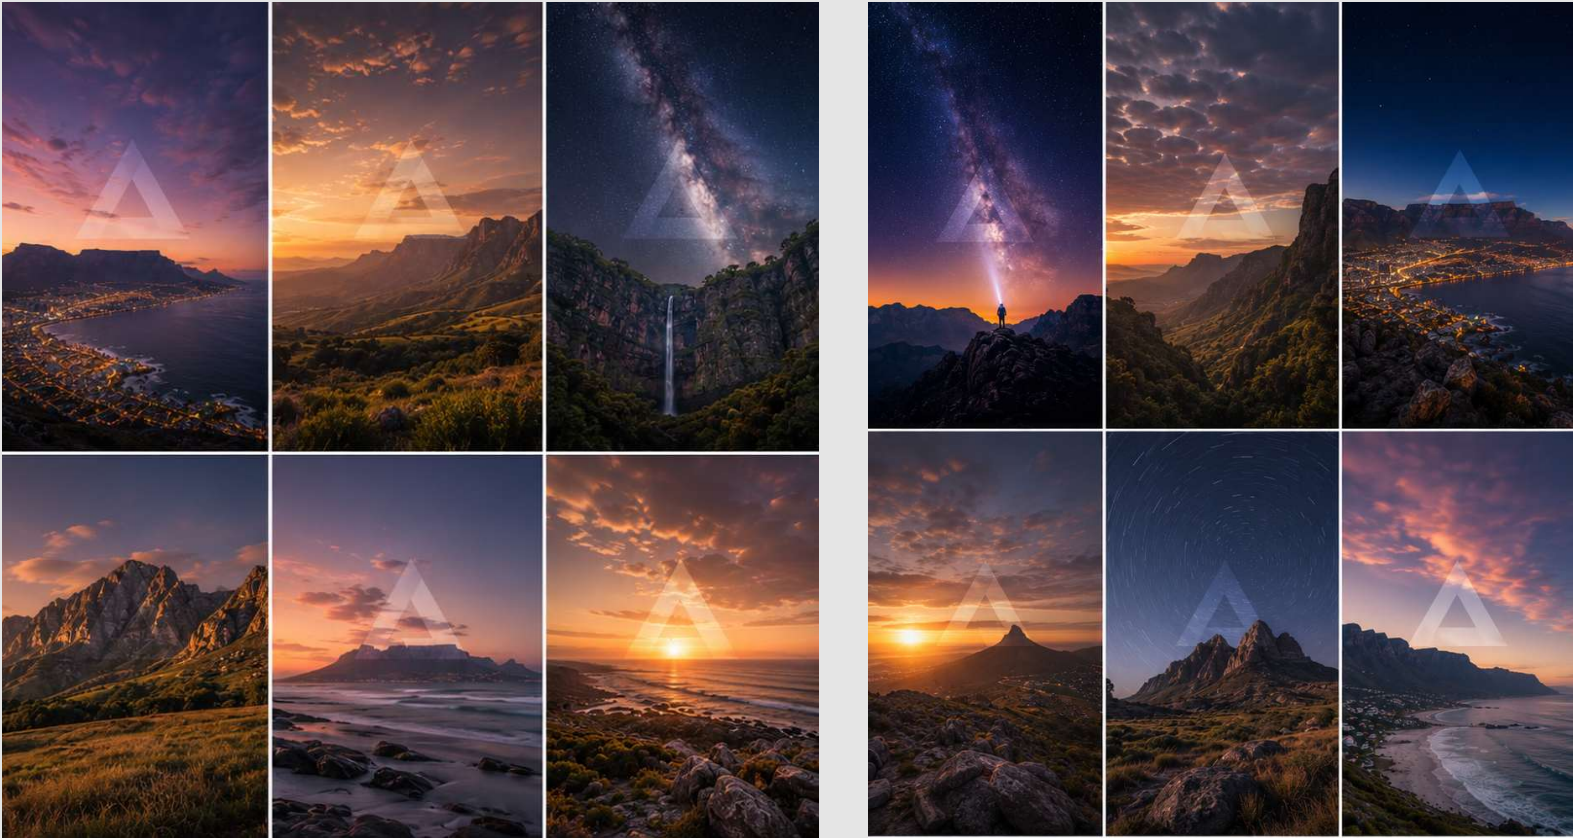

Visual Theme	Core Meaning	Emotional Association	Best Suited For
Space Imagery	Innovation, ambition, future growth, limitless potential	Visionary, disruptive, aspirational	Tech-driven finance, fintech, innovation-led positioning
Mountain Imagery	Stability, trust, strength, long-term achievement	Security, resilience, confidence	Wealth management, investment firms, legacy finance brands

Visual Branding Examples (Landscape)

Visual Branding Examples (Portrait)

Visual Branding Examples (Triangle Structure)

Meaning Behind The Logo

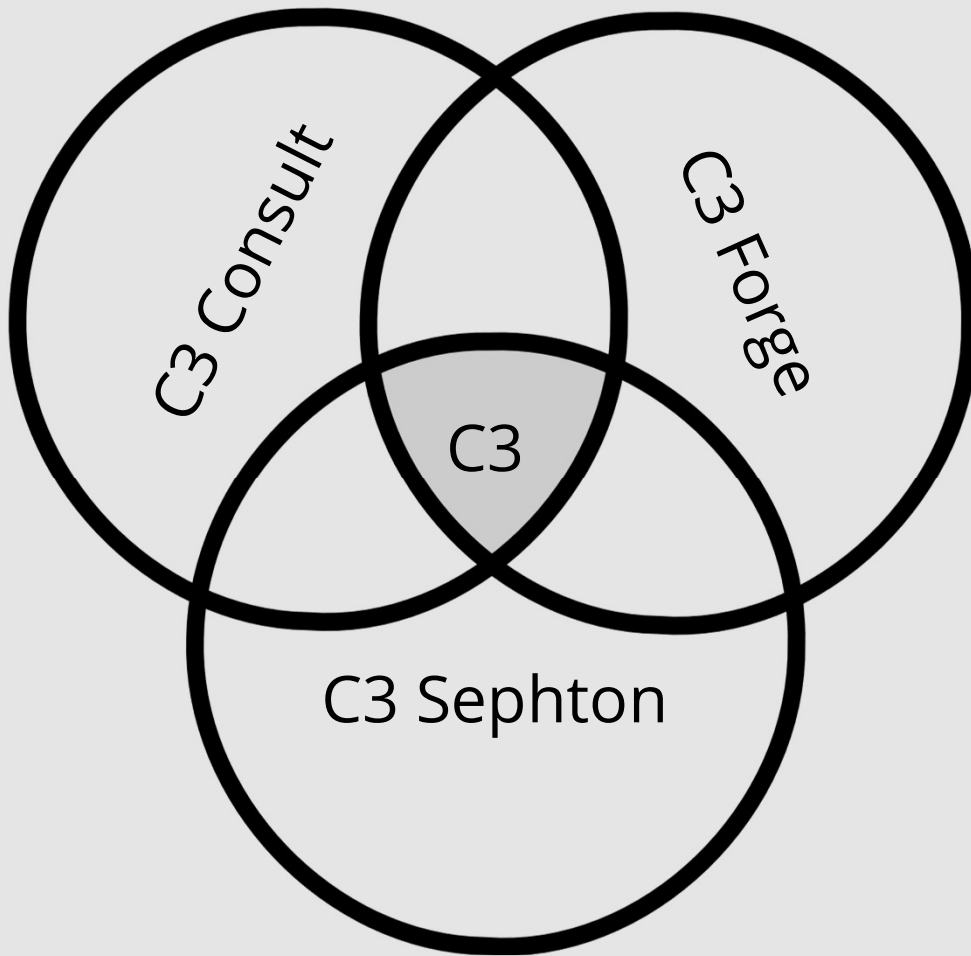

Technology • Operations • Strategy	Transform • Optimise • Grow
Explains what the company does	Explains the value the client experiences
Operational and service-focused	Outcome and transformation-focused
Internal business functions	External brand positioning
Functional and descriptive	Emotional and aspirational
Focuses on process and structure	Focuses on impact and progress
More corporate and traditional	More modern and strategic
Describes departments	Describes results
Less memorable from a branding perspective	Stronger and more emotionally resonant
Speaks about the business internally	Speaks directly to client needs and goals
Tells clients what Convergen3 offers	Tells clients what Convergen3 helps them achieve

Recommendation Going Forward:

“Transform • Optimise • Grow”

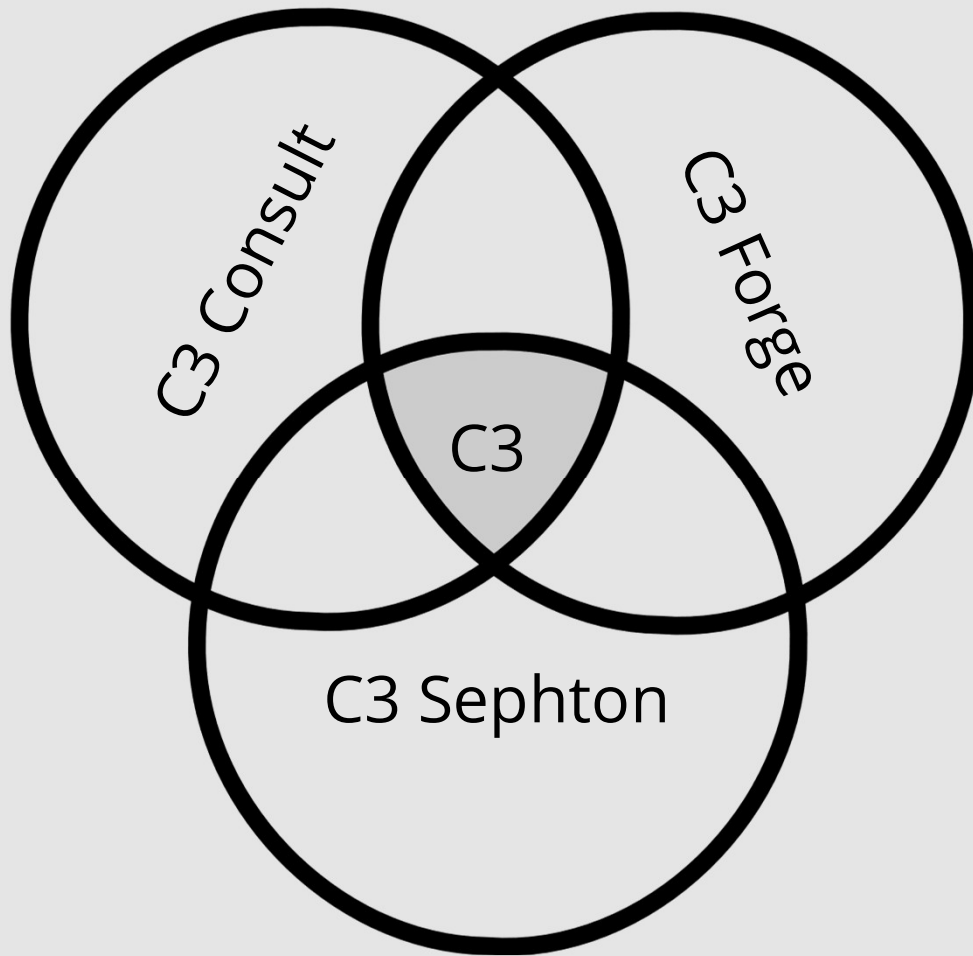

- This should be positioned as the primary external brand message, while retaining **“Technology • Operations • Strategy”** as a supporting internal or operational framework.
- This creates a clearer, more focused, and more scalable brand identity.

Brand Simplification Strategy

Why We Are Simplifying the Brand Structure

- The previous “space” branding from the startup academy created confusion across the wider company identity.
- Multiple visual themes and naming directions caused overlap between departments and diluted the overall brand message.
- As the company grows, maintaining separate visual identities for each division would become increasingly difficult to manage consistently.
- A unified identity creates stronger brand recognition and improves clarity for clients, partners, and audiences.
- Keeping the structure simple allows the business to scale more effectively before introducing more distinct sub-branding in the future.

Brand Simplification Strategy

Brand Structure:

C3 Forge = Start ups (Blue)
C3 Consult = Consulting Out (Red)
C3 Sephton = Academy (White)

Visual Identity and Consistency

What Will Stay Consistent

- Core logo structure across all divisions
- Shared visual imagery and design language
- Unified brand tone and overall identity
- Consistent user experience across platforms and materials

What Will Change

- Division naming only
- Potential colour refinements (e.g. Sephton (black/white), Forge (Blue) and Consult (red))

Why This Works

- Creates a cleaner and more professional ecosystem
- Prevents audiences from feeling like they are interacting with completely separate companies
- Strengthens trust and recognition through repetition and consistency
- Allows all divisions to feel connected under one clear parent brand
- Makes future expansion and merging of services significantly easier

A simplified and unified visual identity strengthens brand clarity today while creating flexibility for future growth tomorrow.
